TWO NEW SPECIES OF THE GENUS *CISPIA* WALKER (LEPIDOPTERA: LYMANTRIIDAE)

CHAO CHUNG-LING

(*Institute of Zoology, Academia Sinica*)

This paper deals with the descriptions of two new species *Cispia* collected from China. Type specimens are deposited in the Institute of Zoology, Academia Sinica.

***Cispia lunata* sp. nov.**

This new species is similar to *Cispia ochrophaea polygramma* Collenette, but ground-colour of the forewing is deep orange to yellow, with veins of the upperside of forewing light buff and a light buff line medially between veins and through the cell, with a light buff antemedial fascia.

Host plant: *Quercus* sp. nov.

Holotype ♀, Jinghong, Yunnan, 5. V. 1978, collected by Wang Yongxian.

***Cispia cretacea* sp. nov.**

This new species is similar to *Cispia alba* Moore, but forewing cretaceous with three black basal spots, whereas in the latter species forewing white with three black basal spots, an angled antemedial line, a black streak at upper angle of cell, an oblique line from near apex to centre of inner margin, both wings with a marginal series of black spots.

Holotype 1 ♀, Mengla, Yunnan, 18. IV. 1982., paratype 2 ♀ 23. VI. 1982, collected by Wang Yongxian.
